# Why Investing in Cyber Threat Intelligence

88%

of companies now consider cybersecurity a critical business risk

Gartner

\$4.45M

is the average cost of a data breach in 2024, a 15% surge in just three years

IBM

100+

countries have laws imposing a personal liability on executives for a data breach

ImmuniWeb

Cyber Threat Intelligence (CTI) empowers organizations to proactively defend against potential attacks. By understanding the tactics, techniques, and procedures (TTPs) of attackers, organizations can identify and address vulnerabilities in their systems before they are exploited. This allows them to focus their resources on high-risk areas and implement effective security measures. Secondly, CTI enables organizations to make informed decisions about security investments and priorities. Analyzing CTI allows them to understand the specific threats they are most likely to face, enabling them to allocate resources effectively and prioritize efforts towards mitigating the most critical risks.

# Efficient. Simple. Cost-Effective.

Bundled with our award-winning attack surface management technology, the cyber threat intelligence will automatically search for security incidents implicating any of your systems, domain names, applications, servers, cloud instances, brands or users, including shadow IT assets and shadow cloud resources.

Just enter your company name to get all mentions of your company or its IT assets on the Dark Web, hacking forums, underground marketplaces or Telegram channels. Our award-winning Machine Learning technology removes duplicates and fakes, offering reliable cyber threat intelligence feeds. Get instant alerts about the ongoing phishing campaigns, squatted domain names, fake accounts on social networks or malicious mobile apps usurping your corporate identity. Detect indicators of compromise (IoC) of your on-premise or cloud-based systems, as well as any mentions of your systems in various blacklists for suspicious or hacking activities.

Dispatch instant alerts about new security incidents, data leaks and cyber threats to relevant people in your DFIR or legal team by using groups and automated incident classification on the interactive dashboard. Export the cyber threat intelligence findings into a PDF or XLS file, or just dispatch them directly into your SIEM by using our API. Enjoy a fixed price per company regardless of the number of security incidents and mentions on the Dark Web. Our security analysts are here to help may you need additional details or support.
